PROFESSIONAL SUMMARY

A dedicated third-year Software Engineering student and aspiring Full-Stack Web Developer with a solid foundation in object-oriented programming, data structures, and web technologies. Experienced in building console applications and structured web interfaces. Proven ability to translate logical workflows into functional software products through rigorous daily coding practice.

EDUCATION

BSc in Software Engineering
Addis Ababa Science and Technology University (AASTU) | 2017 – Present

- **Relevant Coursework:** Fundamentals of Programming (A), Object-Oriented Programming (A), Data Structures & Algorithms (A-), Internet Programming I (A), Discrete Mathematics (B).
- **Academic Highlights:** Maintained strong execution metrics across early system engineering paradigms and programming lab frameworks.

TECHNICAL SKILLS

- **Programming Languages:** C++, Python, Java, JavaScript (ES6)
- **Web Development:** HTML5, CSS3 (Learning), Local Storage Web API
- **Developer Tools:** VS Code, Git, GitHub, Chrome DevTools, Terminal Command Line Interface

ACADEMIC PROJECTS

Student Management System *(C++ / STL Vectors)*

- Mapped data relational flows defining structural properties of digital student records.
- Engineered input management handlers to securely process record additions and conditional field validations.
- Built dynamic layout views compiling data matrices into clean tabular terminal indexes using STL vectors.

Library Management System *(C++)*

- Created a clean object model architecture mapping book structural attributes, availability matrices, and status parameters.
- Managed sequential application states tracking active borrowing allocations and system records.
- Built responsive alphanumeric string search loops to sort, match, and parse local database indexes.

Simple Calculator *(Python)*

- Planned core conditional paths executing accurate multi-operator arithmetic logic configurations.
- Programmed specific execution boundaries to catch runtime exceptions and safely handle zero-division errors.
- Designed a persistent console interface loop to collect parameters for ongoing computational jobs.

CORE PROFESSIONAL COMPETENCIES

- **Technical Communication:** Capable of breaking down application components and clarifying system code architecture to team members.
- **Collaborative Engineering:** Experienced working with peer groups to map out coding logic blueprints and efficiently address execution bugs.
- **Analytical Problem-Solving:** Logical mindset focused on debugging complex structures, tracking program state changes, and optimizing workflows.
